

Liquid paraffin as a cosmetic ingredient

Liquid paraffin is safe, stable, and versatile, and has been used in a variety of products for many years. In recent years, as demand for products for sensitive skin has increased, the hypoallergenic properties and stable quality of liquid paraffin will continue to be required.

★ Excellent moisturizing and barrier support★

Forms a uniform oil film on the skin surface, preventing moisture loss and protecting the skin in dry environments

★High purity/low irritation★

Thanks to advances in high-purity technology, it is safe enough to be used in products for sensitive skin and baby care products. It is also prescribed as a quasi-drug and by dermatologists.

★ Oxidative stability★

Compared to natural oils and fats, it is less susceptible to oxidation and maintains its quality even when stored for a long period of time. From a sustainable perspective, there is no waste and it reduces the burden on the global environment.

Comparison items	Liquid paraffin	natural oils and fats
Safety and stability	◎	△ Easily oxidized
Allergy risk	Low	Depends on the ingredients
Consistency of quality	◎	△ There is a difference
scent	Odorless	Depends on the ingredients

It is compatible with thickeners and surfactants as well as skincare products, and is often used in waterproof and durable makeup products.

LIQUID PARAFFIN

Cosmetics use recommendation article number

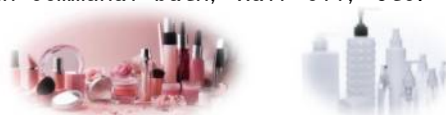

The liquid paraffin is the high-purity and safety and high-stability oily liquid that repeated the refinement to oil (lubricant fraction). It's passed Japanese Standards of Quasi-drug Ingredients 2021, I have you use it as raw materials for cosmetics widely.

Our company removes raw materials impurities thoroughly by putting improvement on refining method under the severe quality control and produces high-quality products.

"Emollient effect" "oiliness ingredient solubility" "oxidation stability" "lubricity" (structure improvement effect) is expected by using it as cosmetics raw materials.

Use example

- Skin care cosmetics : Lotion, Cleansing, Emulsion, Gel cream, Massage charges, etc.
- Makeup cosmetics : Lipstick gross, Foundation, Eye shadow, etc.
- Cosmetics for bodycare : Body lotion, Body milk, Body cream, etc.
- Hair care cosmetics : Conditioner, Treatment, Treatment with communal bath, Hair oil, etc.
- Bath articles : Liquid bath articles
